Challenges of Market Data Management

Siloed Data

- Complexity of external and internal integration with sources and apps.
- Hard to share relevant data.
- Inconsistencies across departments.
- Silos getting out of sync.
- Waste of resources. Increased cost.
- Integrations often break down and produce errors

Poor Quality Data

- Lack of uniformity and standardization.
- Decisions based on bad data are risky and good strategies become worthless.
- Low transparency on data sourcing, processing and delivery.

Low Flexibility

- More and more data is available each day generating new opportunities, however inflexible solutions make it harder to better use the available data.
- Expensive adaptations to new regulatory requirements.

bricken Market Data Hub

SAP® Certified

Built on SAP Business Technology Platform

Co-Innovated with SAP®

- **Data Provider and Source Agnostic:** be completely independent of the source of your market data. Use any and even multiple sources or providers. Make changes any time, adding sources, removing providers, etc.
- **Data Governance Features:** end-2-end data governance with data validations, anomaly checks, transformations, simple and complex calculations, date shifts, inversion, triangulation of rates, interpolation, averages, include formula libraries, etc. – your imagination is your limit.
- **Open Data Models:** expand your data governance to new data classes, e.g. credit risk data, security master data, ESG data, climate data, social data, and any other types of data. Manage them centrally and make them available to any app or process in your system landscape
- **Target System Agnostic:** distribute data to an SAP and non-SAP application. Any system or process can tap into the same central repository of your curated market data. All typical protocols and formats are available, web services, API, ODATA, SFTP, other file protocols, E-Mail, and so on. You can send/push data, or other systems can access the data in the MDH through ODATA APIs.
